## Editor-in-Chief

Prof. Leszek A. Dobrzański – Poland

## Editorial Board

Prof. Gilmar Batalha – Brazil  
Prof. Emin Bayraktar – France  
Prof. Rudolf Kawalla – Germany  
Prof. Stanisław Mitura – Poland  
Prof. Jerzy Nowacki – Poland  
Prof. Ryszard Nowosielski – Poland  
Prof. Jerzy Pacyna – Poland

Prof. Zbigniew Rdzawski – Poland  
Prof. Maria Richert – Poland  
Prof. Maria Helena Robert – Brazil  
Prof. Mario Rosso – Italy  
Prof. Bozo Smoljan – Croatia  
Prof. Mirko Sokovic – Slovenia  
Prof. Leszek Wojnar – Poland

## Patronage

World Academy of Materials and Manufacturing Engineering

Association of Computational Materials Science and Surface Engineering

Institute of Engineering Materials and Biomaterials of the Silesian University  
of Technology, Gliwice, Poland

## Abstracting services

Journal is cited by Abstracting Services such as:

The Directory of Open Access Journals

## Reading Direct

This journal is a part of Reading Direct, the free of charge alerting service which sends tables of contents by e-mail for this journal and in the promotion period also the full texts of monographs. You can register to Reading Direct at

The background of the cover is a grayscale scanning electron micrograph (SEM) showing a highly textured, porous material surface. The surface is composed of interconnected, irregular, and somewhat fibrous or crystalline structures, creating a complex, three-dimensional appearance. A teal-to-white gradient is applied to the top portion of the image, fading into the background texture.

## ***Abstract***

***Purpose:*** The purpose of the monograph is to provide scientific workers and students with comprehensive knowledge on the original methodology of computer aided prediction of development trends in materials surface engineering together with the examples of own materials science-heuristic research used for reviewing the correctness of the newly developed methodology.

***Design/methodology/approach:*** The overall methodology of the integrated computer aided prediction of development trends in materials surface engineering embraces also the methodology of interdisciplinary materials science-foresight-IT research including a group of originally matched, but commonly known analytical methods and tools as well as an original methodological concept, allowing to pursue further research, that encompasses context matrices, the Critical Technologies Book of materials surface engineering and the neural networks-aided creation of alternative scenarios of future events.

***Findings:*** The substantive assumptions of the methodology of computer aided prediction of materials surface engineering development and the examples of reviewing such methodology's correctness, performed under own works together with a state of the art review, with special consideration given to its importance for the research performed related to the integrated information technology including: virtual organisation, web platform and neural networks and importance of the concept of technology e-foresight and technology e-transfer.

***Research limitations/implications:*** The newly established methodology has the broad prospects of future applications. It can be applied in all kinds of technology, thematic and environmental foresights, as well as in other areas of computer aided knowledge and information management as an approach enabling to utilise the currently available economic, system-related, technological, financial and social potential for fulfilling the strategic development objectives.

**Practical implications:** *The purpose of the newly developed concept of technology e-foresight is to disseminate the results of technology e-foresight of materials surface engineering in SMEs lacking the funds to undertake own research in this filed.*

**Originality/value:** *The monograph describes the substantive assumptions of an original methodology of integrated, computer aided prediction of materials surface engineering development and the examples of reviewing such methodology's correctness made under own materials-science and heuristic works. An original value is also represented by the concept of integrated information technology, technology e-foresight and technology e-transfer.*

**Keywords:** *Materials surface engineering; Development trends; Computer integrated development prediction methodology; Technology e-foresight; Technology e-transfer*
